

## **Houston Police Department Now has Multiple Video Surveillance Packages Provided by Pexx**

Pexx, Inc., a Houston based wireless networking and surveillance solutions provider, provided multiple video surveillance (VSP) packages to the Houston Police Department to be used by the HPD security team during Super Bowl XXXVIII festivities. The surveillance package, a unique design by Pexx, was designed and installed by Pexx technical staff.

Jennifer Greene, President of Pexx, pointed out that "these custom packages are mounted in special weather tight boxes to facilitate rapid relocation and installation at special events such as the Super Bowl and can be easily broken down and moved to other locations as required." In a time where security vigilance and real-time situational awareness is a top priority for our country, having a surveillance solution that provides mobility and flexibility, without sacrificing quality is not just a luxury - it is a real requirement for law enforcement agencies and security companies.

Pexx has named these unrivaled boxes the PexxVSP. The PexxVSP is an integrated wireless video surveillance unit capable of acquiring and transmitting high quality, remotely controlled color video plus a number of additional alarm/sensor inputs are available as an optional upgrade. This package is a significant addition to any security operation. With these units as wireless links, security operations can be deployed rapidly and cost effectively with tremendous flexibility. With the addition of heat sensors, motion detectors, or input from any number of auxiliary sensors that can be utilized, the customer has an extra set of eyes in many hard to get to or dangerous places.

"The PexxVSP can greatly increase surveillance capabilities without large capital expenditures and low to no monthly recurring costs" states Ms. Greene. Greene went on to point out that "there are a number of add-on capabilities that can be integrated to the package greatly expanding and enhancing the scope of security operations. These cameras are IP addressable so they can be viewed remotely on a worldwide network if desired. Large scale sites can be intra-linked via our microwave products and returns to Headquarters or NOC's can be accomplished via our VSAT or Fiber products." Pexx has partnered with several leading technology companies bringing endless networking and surveillance solutions to its customers at an affordable price. The PexxVSP, designed for HPD with Super Bowl surveillance operations in mind, the system utilizes 54 Mbps radio equipment and IP based cameras.

Pexx, Inc. a private company, is a technology based solutions architect, systems integrator and VAR. Employing a world class team, with over thirty years of varied industry and military experience. Growing out of a successful project management and consulting businesses, Pexx continues its practice of finding new ways to use technology to improve productivity, control costs and maintain a competitive edge.
