

Pexx Expands Services to Protect Critical Communication Systems

Pexx Expands Services to Protect Critical Communication Systems in the Event of a Natural Disaster

Pexx, Inc. announces that they are now a major supplier of pumps and generators, in an effort to have available large quantities of back-up power generation and pumps enhancing protection of critical communication systems in the event of a natural disaster.

In 2005, when Hurricane Rita hit the Gulf Coast, numerous Pexx Wireless Networks were put to the test and proved to be stronger than the furious hurricane. Today, Pexx has expanded their services to further “insure” that critical communication systems are not lost during the event of a natural disaster.

The “insurance” of having back-up power systems is especially critical for law enforcement, fire departments, cellular and broadcast tower sites, disaster recovery, emergency services, hospitals and medical clinics and other mission critical operations.

Through their new service offering, Pexx now carries transformers, load banks, cables, transfer switches, and other components to complete any type of installation. Pexx power generation professionals are available to design an efficient rental solution for any application and provide complete installation services. In addition, Pexx offers a yearly load-test and certification service along with a monthly site generator maintenance program.

Other Pexx services include wireless networking, cabling infrastructure services, tower installation and maintenance services, and project management services.
